Skills

HTML,CSS,JavaScript,Java,C,C++,Advance java,Multitasking,TeamWork,Self-Motivation,Public Speaking,Public Relations,Good Communication With Others,Patience.

Projects

Touchless Watertap Using Arduino.-Touchless water tap is a new technology developed to prevent unnecessary water usage by preventing the water flow.This is also gaining popularity in large public crowded places such as malls and restaurants, where people share the tap allowing the transfer of germs and bacteria. So, the use of this type of taps and faucets is gaining popularity. A sensor detects the position of the hand or any other object and turns on and off a water pump on another side. Since the technology is relatively new, Buying this from the market is quite costly.We can use an Ultrasonic Sensor to detect the presence of the hand.

Event Application Project

In Event Application we Created a Application which is based on Event. Which gives Information about Event, Event date, time, Venue. And if anyone is Interested then he or she can easily contact to that event Coordinator.
